for once cell-mediated/humoral imbalance occurs it tends to persist until specific measures are taken to shift the immune system back to equilibrium. There are several ways that pattern the reaction of the immune system toward either the cell-mediated response or the humoral response based on their timing and frequency. The impor a C tem buimds timitohumoral

who reported asthma attacks 30-days prior to the study had significantly decreased attacks by an average of 44.9%.

Our children are born with an immune system that is capable of operating against anything that threatens it. Our role as parents should be to support the natural responses of their body in every way that we can; in some cases, that means giving the body a chance to overcome an
